

Lab 2: Agile Backlog Creation & Sprint Simulation

Project: Artisan Marketplace (Jira key: AM) — Problem Statement #31
Student: R Hemanth Reddy (PES1UG24AM390)

1. Epics

ID	Epic Name	Maps to
E1 (AM-1)	Multi-Vendor Split-Payment Checkout	FR-001
E2 (AM-2)	Vendor Storefront & Catalog Management	FR-002
E3 (AM-3)	Product Search & Discovery	FR-003
E4 (AM-4)	Order Tracking & Fulfillment	FR-004
E5 (AM-5)	Ratings & Reviews	FR-005
E6 (AM-6)	Platform Performance & Security	NFR-001, NFR-002

2. User Stories, Priority, Story Points & Status

ID	User Story	Priority	Points	Status
AM-7	As a shopper, I want to check out a cart with items from multiple vendors in one payment, so that I don't pay each vendor separately.	Highest	8	In Progress
AM-8	As an artisan vendor, I want my share of each sale auto-deposited after the platform fee is deducted, so that I get paid without manual reconciliation.	High	5	To Do
AM-9	As an artisan vendor, I want to create a storefront with my shop name and bio, so that shoppers recognize my brand.	High	3	In Progress
AM-10	As an artisan vendor, I want to add, edit, and remove product listings with photos and prices, so that my catalog stays accurate.	High	5	Done
AM-11	As a shopper, I want to search and filter products by category, price, and vendor, so that I can find items quickly.	Medium	5	To Do
AM-12	As a shopper, I want to view a product's details and its vendor's profile, so that I can decide whether to buy.	Medium	2	Backlog

AM-13	As an artisan vendor, I want to be notified instantly when I receive an order, so that I can start fulfillment.	High	3	Backlog
AM-14	As a shopper, I want to track the status of each vendor's portion of my order, so that I know when to expect delivery.	Medium	5	Backlog
AM-15	As a shopper, I want to rate and review a product after a verified purchase, so that other shoppers can trust the feedback.	Low	3	Backlog
AM-16	As an artisan vendor, I want to respond publicly to reviews on my products, so that I can address concerns.	Low	2	Backlog
AM-17	As a shopper, I want product images to load in under 500ms, so that browsing feels fast.	Medium	3	Backlog
AM-18	As a platform operator, I want all checkout data encrypted and PCI-DSS aligned, so that payment information stays secure.	Highest	5	Done

3. Sprint Plan

Sprint 1 (1 Sep – 8 Sep, 31 points): AM-7, AM-8, AM-9, AM-10, AM-11, AM-18

Sprint 2 (planned, 18 points): AM-12, AM-13, AM-14, AM-15, AM-16, AM-17

Rationale: Sprint 1 front-loads the checkout/payment core and vendor catalog, since search, order tracking, and reviews all depend on those existing first.

4.4 Burndown Chart

5. Reflection Questions

Did your estimations reflect the actual effort?

Roughly. The checkout and payout stories (8 and 5 points) were treated as the highest-effort items since they touch external payment logic and split-transfer calculations, while catalog and search stories were scoped lower as mostly CRUD and filtering work. The sprint total came out to 31 points rather than the 29 originally planned, which itself is a small estimation miss worth noting.

Was your backlog well-prioritized?

Mostly. The dependency chain (storefront and catalog before checkout, checkout before search/tracking/reviews) was respected, and the security story (AM-18) was included in Sprint 1 given it touches the same checkout flow as AM-7 and AM-8.

How did your simulated sprint align with your plan?

The sprint board shows a 2/2/2 split across To Do, In Progress, and Done, simulating partial progress rather than full completion. The storefront (AM-9) and checkout (AM-7) stories were left In Progress, reflecting that payment and multi-vendor logic tend to take longer than catalog or security work to fully close out.

What insights did the burndown chart give about your team's capacity?

Because this sprint was simulated in a single session rather than tracked day-by-day over the full week, the burndown chart shows one sharp drop at the start rather than a gradual decline. In a real sprint, this exact shape is a warning sign of a batch update rather than steady progress. The takeaway for future sprints is to log status changes incrementally through the week so the chart reflects real daily burn, and to split the 8-point checkout story (AM-7) into smaller pieces given it is the single largest source of estimation risk.
